

Jordan Example

Software Engineer | jordan.example@example.com | Springfield (remote)

Sample resume: a fictional person and fictional companies, for trying the app.

SUMMARY

Backend-leaning software engineer with five years of experience building web APIs and data pipelines in Python and TypeScript. Comfortable owning a service end to end: design, testing, deployment and on-call. Enjoys turning slow, manual processes into reliable, observable systems.

EXPERIENCE

Software Engineer, Northwind Parcel Co. (fictional) 2022 - present

- Built a FastAPI service that quotes shipping rates for 40k requests per day; cut p95 latency from 900 ms to 180 ms with caching and query tuning.
- Moved nightly batch jobs to an event-driven pipeline on PostgreSQL and a message queue, so warehouse dashboards update within minutes.
- Introduced contract tests and a staging environment; production incidents caused by deploys dropped by half over two quarters.

Junior Developer, Bluebird Learning Labs (fictional) 2020 - 2022

- Developed React and TypeScript features for a course platform used by small schools, including a gradebook and assignment uploads.
- Wrote the first integration test suite for the Node.js API and set up continuous integration on every pull request.

PROJECTS

- Trailhead Notes (personal): offline-first note app with sync conflict resolution; React, IndexedDB and a small Go backend.
- Open-source contributions: documentation and bug fixes for a Python HTTP client library.

SKILLS

Languages: Python, TypeScript, SQL, Go (basic). Backend: FastAPI, Node.js, PostgreSQL, Redis, REST and event-driven design. Frontend: React, TanStack Query. Practices: automated testing, code review, observability, CI/CD, Docker.

EDUCATION

B.Sc. Computer Science, State University of Springfield (fictional) 2016 - 2020
